Subject: ENPRESS Bottom Distributor Plate Equipped Vessels --- Vortech™

ENPRESS LLC is pleased to announce the introduction and availability of Vortech™ --- its NEW Bottom Distributor Plate feature now available in all 9, 10, 12 and 13" diameter tanks. The Vortech™ can be used in all lengths of tanks currently sold, and in conjunction with all other ENPRESS features, like dome hole or dual-inlet vessels, as well.

Attached to this letter you will find the updated ENPRESS Part Numbering Guide, along with the official product press release. We are excited for the launch of this product due to the following performance characteristics:

- Permanent attachment of dip tube to distributor, so when servicing a valve, distributor stays in place, no more re-bedding.
- Elimination of gravel, saving on overall cost and unit weight, for shipping
- Universal plate for use in filtration and softening applications.
- Self-cleaning nozzle design.
- Increase in softening capacity, due to improved flow through media.
- Environmentally friendly, reduction in required backwash times due to improved bed lift at lower flow rates.
- Most efficient softening regeneration, reducing annual consumption of salt.

Please contact us with any question or further required information for this product.

Thank you for your support and continued efforts with regard to the ENPRESS mineral tank line, we look forward to growing our partnership with you and we pledge our commitment to providing the highest quality water treatment solutions to the marketplace today and in the future.

Sincerely,

Michael P. Mormino
